PROFILE

Computer Science student at BINUS University Bekasi specializing in Software Engineering, with an interest in backend architecture, API workflows, and AI/ML integration. A fast learner with an analytical mindset, quick to grasp new systems, algorithmic logic, and technical tools to build clean, functional software solutions.

EDUCATION

BINUS University ***September 2024 - Present***
Bachelor of Computer Science - Software Engineering | GPA: 3.65/4.0

SKILLS

Programming Languages	: C, Java, Python, JavaScript, SQL, HTML, CSS
Backend Development	: Express.js, Node.js, RESTful API, Microservices, Flask
Frontend Development	: React.js, Vite, Bootstrap, HTML5 / Modern CSS
Databases	: PostgreSQL, MySQL
Tools	: Git & GitHub, Docker, Postman, VS Code, pgAdmin 4, Katalon Studio v11, Android Studio, Eclipse, XAMPP

EXPERIENCE

Peer Mentor (SASC) – BINUS University Bekasi ***September 2025 - January 2026***

Academic peer mentor facilitating fundamental computer science and mathematics coursework for junior undergraduate students.

- Selected as a student mentor through a competitive screening process, receiving a tuition scholarship for the active mentoring term.
- Mentored 7 junior students across core foundational subjects, including Algorithm & Programming, Linear Algebra, and Discrete Mathematics.
- Facilitated weekly mentoring and problem-solving sessions to help students grasp programming logic and prepare for exams.
- Awarded the Certificate of Achievement for Excellent Achievement by the Rector for exceptional performance during the program.

Web Developer (Commission 3) – HIMTI BINUS University ***March 2025 - Present***

Active division member contributing to web platform development and student engagement initiatives.

- Served as a Web Developer in Commission 3, collaborating with team members on web-related projects and digital initiatives for the organization.
- TECHNO 2025 (PBP Division Staff): Coordinated programming orientation sessions (Pengenalan Bahasa Pemrograman) to mentor incoming freshmen on coding fundamentals.
- HILET 2025 (Registration Staff): Managed attendee data verification, access control, and onboarding flow to ensure accurate participant records and seamless entry operations.
- Company Visit to Krom Bank (Event Committee): Coordinated event flow, schedule rundown, and participant engagement during the industry benchmarking visit.

CERTIFICATIONS

- **The Complete Full-Stack Web Development Bootcamp** – Udemy (Dr. Angela Yu) | 2026
- **Introduction to Cloud** – Cognitive Class (IBM) | 2026

PROJECTS

Auth & Identity (IAM) Microservice | Node.js, Express.js, PostgreSQL, JWT (RS256), Zod, Argon2, Postman

- Developed an autonomous stateless authentication microservice utilizing asymmetric RS256 JWT, Argon2id password hashing, and Refresh Token Rotation (RTR).
- Implemented request validation schemas via Zod and enforced rate-limiting middleware to protect endpoints from brute-force and credential-stuffing attacks.
- Configured relational user data persistence using PostgreSQL and verified all registration, login, and password-recovery API endpoints via automated Postman collections.

Fake News Detection & MLOps Pipeline | Python, Flask, Scikit-Learn, Docker, NLP, Postman

- Built an end-to-end classification pipeline leveraging NLP preprocessing and Logistic Regression to predict the authenticity of news articles.
- Designed a RESTful API wrapper using Flask to serve machine learning predictions and receive payload requests.
- Containerized the complete application and runtime dependencies using Docker, ensuring reproducible deployment and validating endpoints via Postman.

3D Furniture Visualizer & Estimator Service | React.js, Three.js, Node.js, Express.js, PostgreSQL, Vite

- Engineered a web-based 3D configurator enabling real-time interactive customization of furniture dimensions, materials, and finishing options.
- Developed backend calculation endpoints to automatically compute dynamic manufacturing cost estimations (RAB) based on user-selected parametric specs.
- Implemented configuration snapshot saving using HTML5 Canvas API and body-parser payload handling to store customization history into PostgreSQL.
